

V-Series Pruners

Have you tried a V8?

**Squeeze
to open!**

HP-VS8Z

1. *Sharper*

More aggressive bevel angle (64 degrees) on the precision ground blades (most pruners use 50 degrees).

2. *Superior cutting leverage*

Offset blade angle to maintain natural hand strength.

3. *Expert hardening*

No one hardens blades better than ARS. Edges are not only sharper, but keep their edge longer.

4. *Expert blade treatment*

Blades are hard chrome plated to keep rust, dirt, and sap buildup away.

5. *True single handed operation*

Squeeze the handles to open. Easy to close.

6. *Ergonomic design*

Simple solid die cast aluminum construction is shaped to fit the hand perfectly. Lighter weight, better balanced, and longer lasting.

7. *High quality spring*

Full wire-coil spring is anchored - no popping out!

8. *Easy Maintenance*

Frequent tightening of centerbolts is not required. Centerbolt is specially hardened to prevent spreading. Blade set and spring are easily replaced using a screwdriver.

VSR-Series

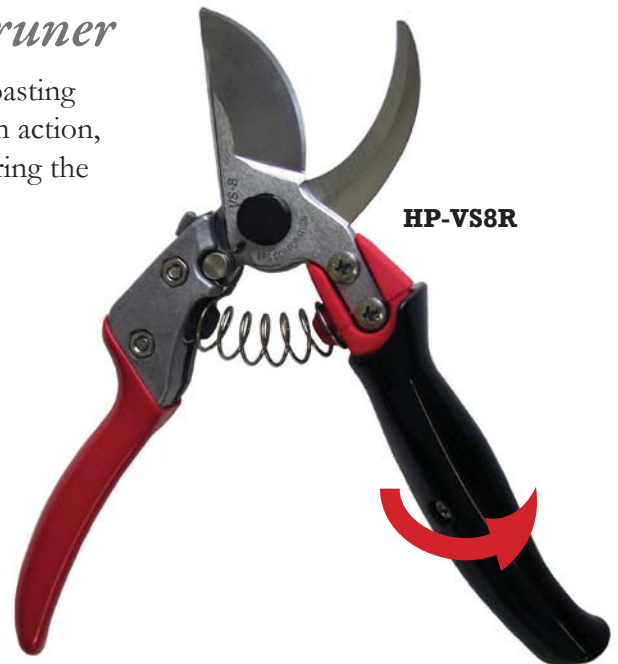

ARS Rotating Handle Heavy Duty Pruner

The popular V-series is now available with a rotating handle. Still boasting the superior VS blade set and spring along with the squeeze-to-open action, these pruners feature a rotating handle to turn with your fingers during the cut - minimizing fatigue and strain. Available in 8" or 9".
